ARIZONA, The WONDERLAND

In all that delights the heart of the tourist Arizona is very rich. The tourist in Arizona soon becomes the settler, and the attractions for the settler are without limit.

Here are the evidences of the earliest civilization. Here is the oldest house in America, the Casa Grande. Scattered throughout the thousands upon thousands of acres in this State are relics of races older than the civilization of the Toltec and the Aztec periods. Mounds or ruins that have been explored are responsible for great stores of material, valuable to the scientist and archaeologist. The mounds that have been examined are but a few of the great number that are found all over the State.

No State is richer in its Indian lore and legend. Arizona has an unending variety of Indian dwellings. Many of them, though unoccupied, are in a remarkable state of preservation today. Still many more are occupied now by Indian tribes whose history is rich in romance and story. There are ancient cliff dwellings now vacant, and quaint stone houses of the "Hopi," perched on the crest of steep wall-like cliffs, the cliff dwelling of today. Indian hogans and the wickiups represent different tribes, and different tribes each may have different branches which in themselves again change the type of dwelling to suit their whims and wishes.

There are varied industries among the Indians. Here the first American is not content to confine his ability to home building, sheep or cattle raising or farming, in addition he may be a basket maker, a silversmith, a pottery maker or a blanket weaver as he prefers.

American Indian industry presents many delightful articles for study. Different varieties of pottery are found in the different sections and made up by different tribes, and what can be applied to pottery can also be applied to basket weaving, blanket weaving and other trades.

The mission history of Arizona is, indeed, of early origin and valued. The most beautiful mission in America today is the San Xavier Mission near Tucson, a gem of a structure worth journeying great distances to see and explore. It is the oldest mission building on the North American Continent, and it is not alone in Arizona. There are several other mission ruins, rich in history but none so beautiful nor so well preserved.

Arizona has much to interest the hunter and the lover of the open field. There are great forests rich in game, including wild turkey, bear, mountain lion, lobos, deer and other game to delight the hunter. Splendid fishing is to be had in the mountain streams fed from snow-banks on the highest peaks. There are great open spaces for camping. Here can one enjoy in summer the cool, invigorating mountain air, and in winter visit the warm valleys where flourish the orange, olive, vine and rose in great profusion. The largest pine forest in the world is in Arizona.

There is the Grand Canyon, God's handiwork not to be described, only to be appreciated when seen. There are canyons of lesser magnitude but equally rich in delight and surprise. Mountain streams and mountain passes, and then the great road from Phoenix to the Roosevelt Dam, rich in scenes and famous, threading the Superstition Mountains and the retreat of the one time dreaded Apache Geronimo. To see the Roosevelt Dam is alone worth a visit to Arizona. Man's masterpiece

of engineering situated in surroundings made by the Master of the universe. The dam is built into the living rock, the sandstone which was third in Nature's process of rock creation. Behind the dam lies the Roosevelt Reservoir, the largest artificial lake in the world, covering twenty-eight miles and storing water sufficient to supply the two hundred thousand acres in the Salt River Valley with water enough to last for years.

Arizona is rich in its desert places. Not the desert of the story but a desert that has a charm of its own. It has its own peculiar type of vegetation, unique varieties of shrub, tree and flower. Mountain ridges and ranges of every rainbow tint edge the horizon in every direction. Arizona is a land of color and contrasts, shades and tints that can not be copied. Sunsets as only Arizona sees them with a sunrise equally gorgeous.

Natural bridges are found in several sections of the State. There is the petrified forest; one of earth's mysterious places. A gem to which there is no duplicate. There are delightful springs where one may visit in search of health, rest and recreation.

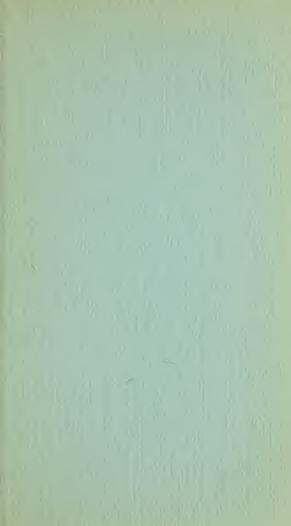

Great mining camps, thriving towns, and an air of activity, effort and energy that astonish the visitor. It is a land of out-of-doors; a land of sunshine rich in undeveloped mineral wealth and possibilities of every kind.

Everything that the heart can wish for can be found somewhere in Arizona. The State is in its infancy. It is only beginning. It needs population of the sort that will help develop its resources. The man or woman ready to put a shoulder to the wheel will here find a welcome, and the compensation for effort and energy expended is well worth while.

ARTICLES DESCRIPTIVE OF THE COUNTIES OF ARIZONA

Contributed

APACHE COUNTY

Apache County is the northeast county of Arizona and is half as long as the entire State. The northern part of the county is taken up entirely with the Navajo Indian Reservation, the citizen population being almost entirely in the southern part.

St. Johns, the County Seat, Springerville, Eagar and Concho are the principal towns. Although the County is crossed by the Santa Fe Railroad, there is no town on the railroad. The Old Trails Highway runs through the county from Magdalena, New Mexico, into Springerville and Eagar; thence through St. Johns and Concho and the far-famed Petrified Forest. The County is a booster of good roads, and is doing its share in that connection. It has some of the best roads in the State and is ready to finish its portion of the new road from Clifton to Springerville.

As the most resourceful portions of Apache County are not on the railroad, it offers the greatest of opportunities to home seekers of limited means and is proving that it is finely adapted to dry farming.

Next to Coconino County, it is the best timbered county in the State, though now it depends largely upon cattle, sheep and farming for its income. It is in Apache County that the Frisco, the Blue, and the Salt and the Little Colorado Rivers head. These streams are filled

with fish. The County offers many more opportunities for summer resorts.

Arizona's original de facto capital, Navajo Springs, is in Apache County and is one of the State's most historical places.

COCHISE COUNTY

Bisbee and the Warren Mining District

Bisbee is the most richly mineralized deep mining district in Arizona. Copper is the predominating mineral of the camp, but gold, silver, lead, zinc and manganese are mined in considerable quantities. Latest reliable figures place the valuation of production at \$57,300,000.00 per year. About 5,000 men are employed in the mining industry of the district, of which Bisbee is the business center. Lowell, Cochise, Warren and Don Luis are thriving suburbs.

The population of the Bisbee-Warren District is about 25,000, and is increasing at a fairly rapid rate. Street car and jitney service connect all parts of the camp. The district is not lacking in educational facilities, maintaining many school buildings, including a magnificent new High School. Churches of nearly every denomination are represented, as well as the Y. M. C. A. and the Y. W. C. A. which boast of a large membership

The great mines of the camp are equipped with every modern facility for mining on a large scale. Owing to these activities, farmers have settled in the valleys of the County and today there are many prosperous farming communities in the Sulphur Springs, San Pedro and San Simon Valleys. McNeal, in the Sulphur Springs Valley is a thriving little community where, a few years ago, the jack rabbit and coyote were

the only inhabitants. Willcox is fast growing into a city of importance, being pushed to the front by the farming and mining interests. Bowie and San Simon are also developing into important farming and fruit raising districts while St. David, Robinson and Light are helping to place hundreds of families on the road to success.

Vast stretches of land considered valueless a few short years ago are now taxable property and a good roads campaign, which is being launched, insures more rapid development and greater prosperity for the future. The famous Borderland Route passes through the County and will prove to be the trail of opportunity to many strangers who may linger at points of interest while touring the Great Southwest.

Douglas

Douglas, the Smelter City of the Southwest and the gateway to Two Republics, is situated on three railroads and five transcontinental automobile highways. It is the trading and supply center for the mining, smelting, agricultural and stock raising industries within a radius of 75 miles.

During the year 1916 the mammoth smelting plants at Douglas produced over one-third of the copper bullion produced in the entire State of Arizona, or over one-ninth of the entire copper output of the United States.

The elevation of Douglas is 3973 feet, and the population 18,875. The Douglas district supports fourteen school buildings, including a modern High School. Like the Bisbee-Warren District, churches and fraternal and social organizations are well represented.

For further information, address the Secretary of the Douglas Chamber of Commerce and Mines.

COCONINO COUNTY

Coconino County forms the largest division of Northern Arizona, and stands the second largest county in the whole United States. It is embraced in the great Colorado Plateau, having an average elevation of about 7000 feet. Many high mountains, superb canyons, sunken deserts, rare forests and verdant valleys dominate its surface.

The physical features of Coconino County are most interesting, and it is known as the "Wonderland of the Southwest." Large in area -180 miles in length and 140 miles in breadthit presents a diversity in climate and soil unsurpassed by any other section of country. It is characterized by an atmosphere wonderfully clear with low humidity, which enhances the beauty of distances indescribably. From east to west it is gashed by the grandest of Nature's wonders-the Great Gorge, at the bottom of which sulks the awe-inspiring mysterious and mighty Colorado River. This section is adorned by the Painted Desert, noted for the bright hues of its shales, sandstones and clays. Red. blue. purple, brown, yellow and white are the colors reflected from this weird expanse. From their giddy heights the prehistoric cliff dwellings and from their frozen sides the ice caves are unusual attractions, as are also the lava beds and the extinct volcanoes. Chief among the latter are the sublime snow-capped peaks of San Francisco, the Sunset Mountain and sturdy old Bill Williams.

Coconino is not only a land of beauty and wonder, but one of utility as well. The Tusayan and Coconino National Forests cover the larger part of the county and are conducive to its greatest industries. The vast area of pine trees contributes to the lumbering industry.

The combined daily output of lumber at Flagstaff. Williams and Cliffs is over 350,000 feet, Stock raising is another leading industry, there being 446,300 acres of grazing land, upon which graze many thousand horses, cattle and sheep. The ozone of the atmosphere, which is so conducive to the health of man, seems also to benefit the domestic animals by rendering them strong and exempt from disease. Farming is well established, there being about 60,000 acres under cultivation. While the farming season is short, it has been found altogether sufficient for good crops of oats, wheat, potatoes, cabbage and other vegetables, as well as alfalfa. The fine fruits from Oak Creek have a wide reputation for flavor and size and have won prizes wherever shown. Brief mention should also be made of bee culture and of poultry raising, both having been attempted with fair success.

Though mining is the leading industry of Arizona, it has not claimed much attention in Coconino County. Good prospects have been found, but development work is not active. There, no doubt, lie buried in our hills and canyons vast quantities of gold, copper and other minerals. Owing to the war demand for copper, the time may be near at hand when the mineral wealth of the country will be proven and Coconino classed among the mining districts of the State.

The law makers of the State have shown their wisdom and forethought by providing liberally the means for advancing education. The Northern Arizona Normal School ranks with the best of its kind east or west, and is a credit both to the County and to the State The other schools are noted for their first-class appointments in every respect. The Lowell Observatory is an institution of research and learning, situated at the County Seat, and the entire State is justly proud in its possession.

The greatest work proposed is the construc-

tion of good roads throughout the county, which are now well under way. The Ocean to Ocean Highway belts the county from east to west, and passes through its main towns, Flagstaff and Williams, from each of which it branches to Grand View and the Grand Canyon.

Flagstaff, the County Seat, lies at the foot of the San Francisco Peaks and is on the main line of the Atchison, Topeka and Santa Fe rail-With a population of nearly 3000, it is a live business center and wide awake in modern improvements and civic advancement. Many points of interest lie within a day's journey of the town. Williams, the town next in size, and claiming a population of about 2000, lies at the base of Bill Williams Mountain. It is the division point for the Grand Canyon Railroad, and about 40,000 tourists pass through the town yearly to visit the greatest of the world's wonders. The little city is well provided with schools and churches, has a good municipal government, and judging from present progress, has a gratifying future.

GILA COUNTY

A Few Facts Concerning its Wonderful Progress and Prosperity During the Last Six Years

Prior to the year 1907, Gila County was (with the exception of the Old Dominion and Mc-Mellan Mines) considered a stock raising county. While stock raising is still a thriving industry, it now takes third place. Gila County lays claim to vast, valuable and diversified natural resources, principally copper, silver, gold, asbestos, tungsten and marble. The asbestos production for the year 1916 was in excess of 2,000,000 pounds; the approximate production for the year 1917 will aggregate 8,000,000 pounds and is worth from one to five cents a pound. The vast area in which this mineral is found, gives promise to its becoming one of the great industries of the country.

GRAHAM COUNTY

Graham County, the Farmers Paradise, with a population of 11,000 inhabitants, has 27,184 acres of cultivated land all under irrigation system, and ranges in value from \$65.00 to \$200.00 per acre.

The land is a rich alluvial soil formation and produces the following crops: Wheat, 30 to 65 bushels per acre; Barely, 50 to 100 bushels per acre; Alafifa, 5 to 8 tons per acre; these being the chief crops of the County. Among other crops raised are the sorghum cane, cotton, corn, apricots, plums, peaches, apples and pears, etc., for which we always have a splendid market and receive the top prices for all our produce.

Graham County raises a great many live stock of which the majority is of blooded stock, such as horses of all classes and breeds, the dairy stock is of an excellent grade and are hard to surpass in any county when it comes to producing. Among other animals raised in Graham County to a great advantage are pigs, chickens, ducks, turkeys, etc.

Graham County is particularly proud of her splendid school system, of which will equal most of the systems found in the large cities of the east.

There are thirty-three districts in the County with an average daily attendance of 2156 pupils, other than the public schools we have a high school at Safford and the Gila Academy at Thatcher, both of which take up all branches of the high school work, the efficiency, discipline and system of these schools is not to be surpassed by any of the like schools in the country.

Graham County is well supplied with firstclass business houses, banks, hotels, etc. The towns of Safford, Thatcher and Pima are all supplied with mountain water of which cannot be surpassed in the State for quality and purity.

For the homeseeker the climate, up-to-date accommodations, along with the social facilities are ideal.

GREENLEE COUNTY

Greenlee County, the fourteenth and youngest county in Arizona, was organized from the eastern part of Graham County, the organization having become effective January 1, 1911.

Although primarily a mining county, a large number of cattle are raised in this county, which industry is being gradually developed. There is also a large amount of land under cu.tivation, and in the southern part are many fine ranches, on which alfalfa, hay, grain, fruit and vegetables are raised, and for the latter, the towns of Clifton and Morenci furnish an excellent market.

For the transportation of ore from mines to smelter, the Shannon Copper Company has built, at a greater cost per mile than any other road in the State, a railroad 13 miles long, and the Coronado Railroad, owned by the Arizona Copper Company, connects the towns of Metcalf and Clifton. The Arizona & New Mexico Railway also passes through the county and connects with the Southern Pacific main line.

Clifton, the county seat, is situated on the line of the Coronado and Arizona & New Mexico Railroads. Morenci is the next town of importance in the county. Both these towns are dependent upon the mining and smelting of copper, and both have excellent lighting, water and telephone systems, all modern conveniences and

splendidly equipped high schools, with superior opportunities for education.

Metcalf, another thriving town, is situated six miles from Clifton on the Coronado Railway, in the heart of the mining district. Duncan is the largest town in the farming district and the shipping point for the farmers and cattlemen of a large area.

The affairs of the county are handled by capable officials, its outlook is bright, and the desirability of Greenlee as a place of residence is constantly being recognized by persons in search of a permanent home.

MARICOPA COUNTY

The early history of Maricopa County is contemporaneous with the history of Yavapai County, of which it was a part from the organization of the territory until 1871. In 1863 gold was discovered in the Vulture Mountains, twelve miles from the town of Wickenburg in the northern part of what is now Maricopa County, and this was the scene of the first industrial activity in the section which is now the County. This was the same year that Arizona became a separate territory. In 1864 or 1865 Fort McDowell was established on the Verde River. This fort played a prominent part in the early Indian wars and was maintained until 1894.

There were a few settlers in the Salt River Valley in the early 60's and in 1867 Jack Swilling, a famous frontiersman, organized a company and built the first canal, then called the Swilling Ditch, and now, with the extensions, known as the Salt River Valley Canal. The first town was established about three miles east of the present site of Phoenix, and removed in a few years and the present city of Phoenix laid out.

The County of Maricopa was created in 1871 by a division of Yavapai County, and Phoenix selected as the County Seat. The branch line of the Southern Pacific was built into Phoenix from Maricopa in 1887, and the branch of the Santa Fe, connecting with the main line at Ash Fork, completed in 1895.

Agricultural Arizona is centered chiefly in and around the Salt River Valley, which has thousands of acres of soil, than which there is no better in the world. Included in the area under irrigation are two hundred and forty thousand acres of the choicest land. The Salt River project is the wor.d's premier irrigation system, with the great Roosevelt Dam as the

backbone. This great work, started in 1916, has already gained a worldwide fame because of its complete success. The dam is built in a narrow canyon about eighty miles from Phoenix. This giant "Atlas" of stone holds back in a great natural basin a world of water wealth which each year adds millions of dollars to the agricultural prosperity of the community. The lake, filling a beautiful valley for a length of twentyeight miles, is surrounded by hill and mountain sides. There are remains of cliff and cave dwellings overlooking the blue waters and the mighty masonry wall. To a height of 284 feet this great wall reaches from the bed of the river, where it is sunk into the bedrock for thirty feet deep. It is locked into the canyon walls on each side for thirty feet, is 168 feet thick at the base and reduces, step by step, until at the top, where it is crowned by a roadway, it is twenty feet wide. Across the top, including two fine bridges which span the spil ways, the length of the dam is 1125 feet. During the spring of 1916, the water flowed over the spillways to a depth of eleven feet, creating two wonderful waterfalls, each 250 feet high and having a combined width of 425 feet. The water stored in the lake is 1,367,305 acre feet, or enough to cover the same number of acres with water to the depth of a foot. The water generates electric power on leaving the dam, about 25,000 horsepower being secured in this way. There are 781 miles of main canals in the valley served by water from the Roosevelt Dam system, and there are approximately 4,500 farmers under the project. It took five years to build the dam, and no conception of its dignity, its bigness and its beauty can be secured except by seeing it. When the water is flowing over the spillways, dashing down two hundred and fifty feet on the rocks and sending up clouds of spray, with every color of the rainbow, then, and only then, can one appreciate the true magnificence of the dam.

--56---

More than one-third of the land under irrigation is in alfalfa. Forty thousand acres of long staple Egyptian cotton is under cultivation. Sixty-five thousand dairy cows furnish milk and cream for a number of creameries and a condensed milk factory, and bring into the county a revenue of \$42,500,000. The annual production of the farms of the county is estimated at \$10,544,000; the valuation of the livestock is \$8,789,000. With the splendid soil and complete system of irrigation in the Salt River Valley, there thrive the date, orange, lemon and grapefruit: sugar beets yield 19 per cent of saccharine matter; cantaloupe is produced in great quantities; the fig, peach, pear, plum, in fact, nearly every variety of fruit trees bear with big returns.

The livestock industry can be operated with great success. Sheep graze throughout the surrounding country and are brought in large numbers to the Salt River Valley for shearing and fattening. Conditions for dairying are ideal.

Favorable as the climatic conditions are for agriculture, they are also ideal for health. The dry, clear atmosphere encourages out-of-door occupations. People live more in the open owing to the congenial conditions prevailing most of the year, and all of this counts for health, vigor and active life.

In the heart of the Salt River Valley lies the city of Phoenix, the capital city of Arizona and the busy business city-of the new State. The growth and future prosperity of the city are assured by the immense possibilities of 230,000 acres of agricultural land. Markets for the produce of the valley are found in the mining camps in the State, and much is shipped throughout the country.

The educational system is not excelled. Many beautiful High Schools and Graded Schools are everywhere in the County. At Tempe, there is situated a Normal School, of which the county is justly proud.

There are more than 300 miles of railroad within the county, valued at \$10,432; 9,996 miles of telephone lines and 837 miles of telegraph lines.

To those who make a change from choice, and to those who must of necessity make a change, the Salt River Valley of Arizona offers opportunities which surely will satisfy all the most exacting requirements.

MOHAVE COUNTY

Mohave County, forming the northwest corner of Arizona, is the second largest in the State, its extent being 13,000 square miles.

The resources of the County are diversified, consisting of mining, livestock and farming. Mining is the principal industry, mining properties forming three-fourths of the County's assessed valuation. Every known base and precious metal is found. The Wallapai and Cerbat Mountain Ranges, extending the entire length of the County north and south, are rich in gold, silver, copper, tungsten and molybdenum. About 1,000 miners are employed in the County. The mineral output is approximately \$8,000,000 a year.

There is little farming carried on in the County, mainly because of the lack of available water for irrigation purposes. The cattle and sheep industry, however, is becoming a material asset.

NAVAJO COUNTY

Navajo County bears the name of a noted tribe of Indians. It is located in the northeastern part of the State and is about 200 miles long, north and south, and forty-eight miles wide. The elevation ranges from 4.850 feet at Winslow to about 11,000 feet in the White Mountains, with an annual precipitation commensurate with the elevations, ranging from 10 to 36 inches. The prevailing winds are from the southwest.

Like much of Arizona, Navajo County is made up of streaks of fat between broad plains of lean. The fat streaks are the fertile cultivated and agricultural valleys, mountain glades and stream courses, while the lean are the broad upland grazing plains. The southern part of the County is embraced in the Sitgneaves Forest Reserve with headquarters at Snowflake, and the Apache Indian Reservation. In the forest are a number of small sawmills which furnish lumber for building purposes throughout the County.

The plains are ideal grazing areas for cattle and sheep as the winters are fairly mild. Native grasses are abundant in season and browse plants, such as chamisa and shadscaie plentiful for forage during the winter. The chief drawbacks are scarcity of water during the dry season and poisonous plants such as loco and larkspur. With the development of water by constructing storage tanks in suitable places, by sinking wells, and by eradicating poisonous plants and exterminating prairie dogs, the carrying capacity of the range can be increased 20 to 30 per cent.

There is a white population of over 12,000, and a goodly number of Indians on the Moqui

Indian Reservation, which occupies the northern portion of the County.

The irrigated valleys yield abundant crops of alfalfa, small grain, corn, fruit, potatoes and truck crops, while the glades in the timber belt are developed by dry farming methods, the chief crops being beans, wheat, cats, corn, cane and Sudan grass.

The main line of the Santa Fe Railroad crosses the center of the County from east to west, following the course of the Little Colorado River and Rio Puerco.

The chief towns are Winslow, Holbrook, St. Joseph, Woodruff, Snowflake, Taylor, Showlow, Pinedale and Lakeside. Winslow and Holbrook are trade centers on the Santa Fe. Here a number of large mercantile houses carry complete and sufficient stocks for distribution to every part of this and Apache County. Other towns and many rural settlements are located at favorable places on rivers, streams and in mountain valleys. These towns are connected by telephone lines and auto roads.

A bond election for \$165,000 has recently been carried for road building purposes. This, with the completion of a number of bridges now in the course of construction, will make our roads equal to the best in the Southwest.

A highly efficient common school educational system is maintained by the County and State, with high schools at Winslow and Holbrook. An excellent denominational academy, offering four-year courses, is maintained at Snowflake by the L. D. S. Church. The Government maintains schools for Indians on the Reservations.

The mountain districts are the sportman's paradise during the open season, large and small game and fish being found in abundance. To the happy farmer and pleasure-loving business man, the forest covered mountains are a luxury

of refreshment and a haven of rest during a short summer vacation.

To the man of science and imagination, the Petrified Forests, the many ancient Indian ruins and the Indians themselves, offer a wealth of opportunity for study, reflection and writing.

PIMA COUNTY

The history of Pima County reads more like a romance than a chronicle, and were it possible here to allow sufficient space, a most interesting story could be told. The account of the wanderings of Alvar Nunez, passing through this section a quarter of a century before the Spaniards founded San Augustine, Florida, and the expedition of Padre Marcos de Niza, made for the purpose of verifying Nunez's stories of the Seven Cities of Cibola (Moqui and Zuni Villages), furnishes material for many lengthy chapters, and the story of the march of Coronado the following year (1540) from Culiacan through the Country of the Pimas, down the valley of the Santa Cruz, by the present site of Tucson, and across the Pima settlements on the Gila River, would make up a volume. But there would be need for many volumes for there were numerous expeditions into this region.

The next was in 1582 by Antonio de Espejo, who first told of Arizona's precious metais, and a little more than a century later the Jesuit Padre, Eusebio Kino, came out from Mexico City, founding missions a day's journey apart, and after founding the Mission of Guevavi, about thirty miles south of Tucson in 1687, established San Zavier del Bac, nine miles south of that city in 1692.

About the middle of the eighteenth century the Apaches arose in revolt, after which the

Spanish Government erected a Presidio at Tucson and maintained a small garrison for the protection of the people. The ravages of the Indians continued in the outlying districts, however, and by the close of the Mexican War in 1847, a century later, they had destroyed all of the evidences of civilization except the walled presidios. Then in 1853 came the Gadsden Purchase, by the terms of which Pima and parts of surrounding counties became American teritory, which was followed by a general immigration of Americans and the taking of possession of the Presidio by United States soldiers.

With the development of the mineral resources of the region and the placing of cattle on the open ranges by the immigrants, the Presidio of Tucson soon became an important trade center, and when the Southern Pacific Railroad built its line to the Coast in 1880, it was run through Pima County, and from that time the County may be said to have begun to grow in importance as a producer of mineral wealth and cattle, and Tucson, its only important city, became a great trade center and the metropolis of the State.

Less than a decade ago the Southern Pacific made Tucson the junction point for its new system down the west coast of Mexico, via the Nogales gateway, and in 1912 the El Paso & Southwestern System (a connection of the Rock Is.and) made Tucson its western terminus. In 1916 the Calumet & Arizona Copper interests constructed a forty-mile line from Gila Bend to the Ajo district, where they have extensive copper properties, 137 miles almost due west of Tucson.

This commanding position given to Tucson by connection with these great railroad systems, with El Paso 300 miles to the east, Los Angeles 500 miles west, and no other important city either north or south for more than a hundred

miles, has made it the central trading point of a great inland empire, as large in area as all of New England. The general offices of the Southern Pacific Lines of Mexico, the Arizona Eastern Railroad, the Southern Pacific Company, the Ei Paso & Southwestern System, and the shops of the Southern Pacific Railroad are located in this city, giving employment to more than one thousand Tucsonians. There are large flour mills, two ice plants, a gas and electric light corporation, a traction system, local and long distance telephone system, machine shops, mining and pumping machinery houses, carriage and saddle factory, brick yards, planing mills and a foundry. The annual payroli of these industries, including the railroads, is more than three millions, with approximately two thousand persons employed. Six million dollars are on deposit in the four banks, two National and two State: the city tax valuation exceeds twenty millions, and that of the County thirty-five millions.

This rapid development is the result of great strides made in mining, cattle raising and agriculture. The Calumet & Arizona Mining Company, American Smelting and Refining Company, Copper Queen Consolidated Company, United States Smelting and Refining Company, and Empire Zinc Company are all actively at work developing properties in the most promising mining districts in Pima County. The cattle industry is growing in importance each year and during 1916 netted \$2,000,000 for cattle shipments. The raising of sheep, goats and hogs, as well as dairying and poultry raising, are also important sources of revenue.

In less than five years thirty thousand acres have been brought under cultivation by pumping from the underground water flow in the valleys surrounding Tucson, and there are large dry farming districts in the foot hills of the mountain ranges.

In keeping with its development the County has provided an excellent school system, and a child can advance from the kindergarten through the graded and high schools to the State University, which is located in Tucson. Churches of all denominations are represented.

Climate—Eminent physicians state that climatic conditions in Pima County, and particularly Tucson, make it a most healthful district, and the seasons gradually merging into each other, with no sudden changes in temperature, no extremes in heat or cold, bring most beneficial results to those afflicted with bronchial or lung trouble, catarrh, asthma, rheumatism and other kindred complaints.

Tucson is surrounded by mountain ranges of altitudes varying from 4,000 to 9,000 feet, in which are spots of great scenic beauty and many delightful camping places and sites for summer cottages. There are many points of scenic and historic interest which the tourist may visit, among which are San Xavier Mission, Picture Rocks, Old Fort Lowell (the scene of many a fight with Apaches), pine-covered slopes of Mt. Lemmon, Tumamoc Hill and other old Indian fortifications, and farther distant Tumocacori Mission and the Casa Grande Ruins, ail of which are reached by splendid highways.

PINAL COUNTY

Pinal County, although one of the smallest divisions of Arizona, is looked upon as one of the coming counties, as nature was here particularly lavish of her favors. Pinal has a wondrous landscape of mountain and mesa, valley and canyon, with exquisite coloring. On the higher mountains are forests of pine, oak, ash and walnut. Through the county run the Gila, the San Pedro and the Aravaipa, while on both sides of these streams are level stretches of land of wonderful productive capability and endurance. Then, too, large areas within the county are impregnated with all the precious metals and minerals of commercial value. Last, but not least, Pinal is possessed of a climate semitropical in mildness and unsurpassed in its health-giving properties, with an atmosphere dry and pure in the extreme.

The mineral district of the county covers at least two-thirds of its surface area, the greater portion of which has not yet been touched by the prospector's pick. Yet the mines of the County have yielded in gold, silver, lead and copper a total of \$200,000,000. The metals and minerals here exist in both veins and pockets, and where explored have proven of great magnitude and value. As the unexplored surface exhibits the same prysical condition and the same evidences of mineralization as do those which have been explored, it is rational to assume that they, too, will prove both extensive and valuable. usual metallic constituent ores in Pinal are gold. silver, copper and lead, and most of them carry a sufficient percentage of iron and lime to make them self-fluxing, thereby reducing the cost of smelting to the minimum. There also exist, in undetermined quantities, ores of the rarer metals such as platinum, uranium, nickel, cobalt, bismuth, tungsten, vanadium, etc. Bituminous coal measures, in an undeveloped state, but sufficiently prospected to demonstrate they can be made profitably productive, exist in the Deer Creek district. The two great mining properties of the County are the Magma at Superior, and the Ray Consolidated at Ray.

Pinal County has a vast body of fertile agricultural land needing only water to make it as fruitful as the delta of the Nile. Through the center of this great stretch of land trails the Gila River, with its 17,000 square miles of watershed and phosphated water, while through its southern portions runs the Santa Cruz River. The underground waters of the Santa Cruz are sufficiently near the surface to make irrigation, by means of pumping plants, feasible and profitable. During the past year several hundred acres of land have been put under successful irrigation by means of pumping, the lift being from thirty to sixty feet. Congress has appropriated \$250,000 for the construction of a diversion dam on the Gila River east of Florence and for the beginning of a distribution system. This diversion dam will provide a means of diverting water from the river for irrigation purposes at all times of the season. Heretofore, water was diverted by means of brush dams, which have been a constant source of expense and worry to irrigators. There are now several canals-besides several privately owned canals-taking water out of the Gila River near Florence, by which method thousands of acres are irrigated.

In the San Pedro Valley is a large acreage of exceedingly fertile land that can be reclaimed by river and artesian water. The Aravaipa Vailey, which comes into the San Pedro Valley about twelve miles above Winkelman, has an abundant water supply in the Aravaipa creek, which flows through the center of it, and all the lands of this picturesque little valley are

planted to fruit, including navel oranges, lemons, apples, peaches, pears, apricots, plums, grapes and all kinds of berries.

Owing to a rare combination of c imate and soil conditions, the land surrounding Florence, and extending to and surrounding Casa Grande, will produce to perfection oranges, lemons, grapefruit, olives, figs, nectarines, peaches, apricots, plums, pears, pomegranates, grapes and all kinds of berries.

SANTA CRUZ COUNTY

In March, 1899, there was cut off from Pima County approximately 1,210 square miles, which made a new county called Santa Cruz. This little county started out in life handicapped with a bonded indebtedness of approximately \$86,607 against an assessed valuation of approximately \$867,943, and about \$12,000 in the treasury. Today the assessed valuation is over \$8,000,000, and the bonded debt, together with all other debts of every kind, is only \$474,042.20, with \$165,162.71 in the treasury.

It is not generally known that the small area embraced within the limits of Santa Cruz County was the seat of the earliest mining known on the Pacific Slope. Without doubt, the first and earliest mining in these regions was done by the Jesuits who founded a chain of missions in the valley of the Santa Cruz River. In what is now Santa Cruz County, three missions were counded by Father Kino, the first at San Felipe Fluevavi in 1687, about nine miles northeast of Nogales, another at San Cayetano del Tuma-sacori (known now as Tumacacori) in 1691, about nineteen miles northwest of Nogales, and third at Hantiago about the same time, the

site of which is not accurately known. The old church at Tumacacori is in ruin, fast falling down, and the Guevavi is nothing more than a mound of earth.

While some of the oldest mines are still in operation and yielding a good output every year, the more recently discovered and developed mines are yielding good outputs, principally of gold, silver, copper, lead and some iron ore.

While the mines have been developing, other industries have been keeping abreast with the tide of advancement, and not the least of these is the farming industry. Where, a few years ago, were many thousands of acres of unfenced range lands, today are fie.ds of corn, beans, potatoes, a small amount of grain, and the more perishable vegetables, which are sold and consumed in this county, very little going to Some of the farm exhibits of outside trade. this county have brought home blue ribbons from the State Fair in Phoenix. However, there are still many thousands of acres of range land, where feed and water is plentiful for the range cattle. A few years ago cattle were selling for \$20, \$30 and \$40 per head, which at that time was considered a good price, and today they are selling for \$30, \$40 and \$50 per head.

Along with the progress of this little county has come good roads. Of the 185 miles of roads in Santa Cruz, 75 miles are good, such as the Nogales-Tucson Highway and the Nogales-Patagonia roads—roads that are as good and as scenic as can be found anywhere, leading, as they do, past such interesting sights as Tubac—the oldest town in the United States—Tumacacori, Guevavi and old Fort Crittenden, where many of the settlers, in the early days of Apache raids, had to seek protection many times and at great risk of their lives.

Truly, eighteen years have wrought wonderful changes in this, the smallest spot on the

map of the best State in the Union, and may her growth and prosperity be as good and as everlasting as the water that flows from her streams and springs.

YAVAPAI COUNTY

Yav-a-pai was the name given by the Apache Indians to all of northern Arizona. It means literaily, the mountain country, being derived from "yava" (the hills) and "pais" (pronounced "pie"—a corruption of the Spanish word "pais," meaning land).

Yavapai County is situated nearly in the geographical center of the new State of Arizona. Within its boundaries are several of the richest mines in the world. Its broad fertile valleys contain large areas of soils of great depth, which produce the finest quality of grains, vegetables, deciduous and small fruits in the Southwest. Its citizenship, gathered largely from the southern and western States, but representing every State and Province in the Union and in Canada, s second to none in the world. Prescott, the County Seat, has a foreign born population of but 8 per cent, the lowest in the Southwest. no country will be found men and women of higher culture; nowhere are educational facilities in a higher state of development.

Gold was the magnet which attracted and inspired the California Argonauts and gold seekers in the early '60's to penetrate and prospect the Colorado River and its tributaries for the precious metal. The first permanent American settlement was established in this part of the pountry in 1862, where the County Seat of Yava-pai—Prescott—now stands.

Yavapai County consists very largely of maestic mountains, lofty table lands and beautiful fertile valleys, nestling at altitudes of from 2400 to 6000 feet above sea level. The principal industries of this vast domain are mining, stockraising, farming, and to a large extent, its climate is considered a valuable asset.

Mining-Due to the heavy demand for copper and the condition of the metals market, during the year 1916 Yavapai's principal industry showed a wonderful increase and brought prosperity to hundreds of her citizens as well as to successful investors throughout the United States. With the opening of that wonder mine. the United Verde Extension, better known locally as the "Little Daisy," an impetus was given the mining industry which has awakened the world to the fact that here is located one of the richest, if not the richest, mining districts in America. Here may be found gold, silver, copper lead, zinc, tungsten, antimony, molybdenum, onyx, marble, tufa, granite, red sandstone, limestone, cement, clays and fire clays. With the excellent railroad and smelter facilities and the market for supplies, this section today offers one of the best fields for mining to be found anywhere.

Stockraising is the second industry in importance in Yavapai County. Of the livestock industry, sheep raising is perhaps the most important branch. Many large bands graze on the mountains during the spring and summer months and gradually make their way to the lower valleys in the fall and winter. The oak brush, which is an evergreen, and the grasses of the mountain sides, supply forage for the summer months, and the grasses of the valleys and foothills during the winter months. Mesquite brush and catsclaw also supply excellent browsing. Cattle in this locality are healthy and free from disease, the average estimated increase being 85 per cent. Considerable attention has been given to the raising of goats during the past few years.

Farming occupies the third place in importance with respect to Yavapai's industries. The principal valleys are Big Chino, Little Chino, Ferguson, Lonesome, Peoples, Santa Maria, Skull, Thompson, Williamson and Verde. Large areas in these mountain-girt valleys, only a portion of which are under cultivation, contain fertile arable soils, in depth from two to fifty feet, and at altitudes averaging 4000 feet. Yayapai County bids fair to equal any other deciduous fruit district in the United States for the quality, flavor, size and texture of her apples, plums, pears, peaches, apricots and small fruits. At the St. Louis Exposition, the silver medal for apples was awarded Yavapai County, competing against the world. Gold medals and blue ribbons have been won by her fruits and vegetables at various times at the International Farming Congress.

Railroads—The main line of the Santa Fe runs through the northern part of the county for a distance of sixty-three miles, Ash Fork being the junction point for the branch line to Prescott and other centers southward. The Prescott and Eastern, and the Bradshaw Mountain Railroads, also branches of the Santa Fe, penetrate the rich Crown King and other famous mining districts. Prescott, Jerome, Humboldt, Mayer, Congress, Jerome Junction, Clarkdale and Seligman, with aggregate population of approximately 18,000 are the principal markets of the county.

General Advantages—The educational facilities of Yavapai are worthy of comment. Here are to be found schools, churches, clubs and benevolent societies, which in membership, equipment and excellence would do credit to the most advanced and densely populated sections of the Eastern States. For the sightseer and artist, Nature has wrought in close companionship all of that jugged charm that attracts in the Garden of the Gods and other meccas of

world-interest. Its cliffs and cave-dwellings and hieroglyphic records are held by experts to be as old as the pyramids of Egypt. In mileage, excellence of construction and upkeep of her state highways and county roads since statehood, Yavapai County has made the greatest progress of any county in Arizona. The trip from Prescott to El Tovar, Grand Canyon, a distance of 130 miles, can be made comfortably in a day. Many points of interest, such as Cathedral Cave, Granite Dells, Montezuma Castle, Montezuma Well and Finnie Soda Springs are easily accessible. A day full of charm and interest can be spent on the trip to Jerome and Clarkdale, where are located, respectively, the great copper mine and mammoth smelter of the United Verde Copper Company.

Climate-The climate of Yavapai County is one of its chief lures. Throughout its broad domain there are more absolutely clear days during the year than in any geographical subdivision of like altitude in the world. Here is found especially a desirable all-the-year-round climate, everywhere cool in summer and varying from mild to cold in winter, according to the elevation.

When it is taken into consideration that Yavapai County's assessed valuation in 1916 was \$58,277,781.41, showing an increase over 1915 of \$12,741,935.21, it may readily be seen that she is but in the infancy of her growth.

Those desiring to acquaint themselves more particularly with respect to Yavapai's industries, etc., are invited and requested to address the Commissioner of Immigration for further information.

YUMA COUNTY

There is no richer section of the world than Yuma County. In the early days it was noted principally for its production of gold, silver. copper and lead, at which time agriculture was almost unknown because of the arid condition of the soil. Millions upon millions of dollars of the precious metals were shipped by boat from Needles. Parker and other points along the turbulent Colorado, a regular line of steamers plying between those points and San Francisco, California. In those days the mines were worked in the crudest possible way and unless they showed phenomenal richness they were abandoned forthwith. In recent years, many of these old abandoned mines have been re-opened and today are rated among the big producing mines of the State, vet the vast mineral territory of the County has merely been touched. freely predicted that within the coming year some of the richest and best paving mines in the State will have been developed in the Parker-Bouse-Swansea districts to say nothing of the phenomenally rich gold mines almost at Yuma, City's door,

In recent years, through the aid of the U. S. Reclamation Service, Yuma Project has been highly developed, something like 100,000 acres of the richest valley lands in the State now being under irrigation. All kinds of grain, corn, vegetables, alfalfa, cotton, deciduous fruit and berries grow to a perfection not attained elsewhere, while the 40,000 acres of mesa or high lands immediately adjacent to the city of Yuma are now being prepared for irrigation under what is known as the Yuma Mesa Auxiliary Project. In his report to Congress advocating the passage of the bill making this possible, Secretary of the Interior Franklin K. Lane de-

clared that this 40,000 acre tract is the only frostless belt in the United States. Oranges, lemons, grape fruit, tangerines, dates and figs grow to the greatest known perfection on this immense tract of "frostless" land, and they are all from one to two months earlier than the earliest fruit of the same character in either Florida or California. Even tomatoes can successfully be grown on the mesa all the year round, which opens up a wide field for early truck gardening as soon as the government completes the irrigation system for the Yuma Mesa Auxiliary Project.

Stockraising has become one of the best paying industries in Yuma County since the opening up of the project. Alfalfa produces from seven to ten cuttings per year, with an average yield of upwards of one ton to the cutting. Kaffir corn, milo maize and federeta are the staples for forage and fattening purposes, each of these grains producing an average of two tons of seed per acre and ten to twelve tons of forage per acre in addition. Hogs and cattle, therefore, are raised in great numbers on Yuma Project and adjacent wild ranges.

All kinds of deciduous fruit do remarkably well on Project lands, especially the luscious apricot, the very first and most deliciously flavored in the market being shipped direct from Yuma as early as the first week in May. Peaches do equally well, as does the Bartlett pear. In the vegetable line, Yuma is noted for its cabbage and lettuce, the latter conceded to be the finest grown anywhere the in the world. It is a common thing for these two vegetables to yield from \$800 to \$1000 per acre.

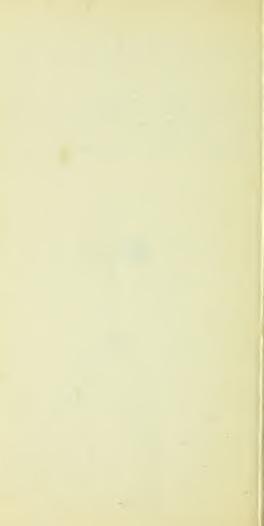

A new industry destined to become quite popular is that of the Texas paper-shell pecan, which thrives on Yuma Project as well as it does in its native state. It is predicted that in a few years practically all the irrigating ditches

throughout the Project will be lined with these nut trees. They are quite prolific and there is never any danger of enough frost to injure them.

Cotton, also, is becoming one of the leading crops of the Valley. It is safe to say that no less than 12,000 acres are planted to cotton this year, and this will bring an average yield of at least one bale to the acre.

Yuma Valley may well be called "The Land of Promise."

ARTICLES DESCRIPTIVE OF THE COUNTIES OF ARIZONA

(Contributed)

APACHE COUNTY

Apache County is the northeast county of Arizona and is half as long as the entire state. The northern part of the county is taken up entirely with the Navajo Indian Reservation, the citizen population being almost entirely in the southern part.

St. Johns, the County Seat, Springerville, Eagar and Concho are the principal towns. Although the county is crossed by the Santa Fe Railroad, there is no town on the railroad. The Old Trails Highway runs through the county from Magdalena, New Mexico, into Springerville and Eagar; thence through St. Johns and Concho and the far-famed Petrified Forest. The County is a booster of good roads, and is doing its share in that connection.

There is now being constructed what is known as the Lyman Dam, which, when completed, will furnish water to irrigate some 15,000 acres in and around St. Johns.

As the most resourceful portions of Apache county are not on the railroad, it offers the greatest of opportunities to home seekers of limited means and is proving that it is finely adapted to dry farming.

Next to Coconino County, it is the best timbered county in the state, though now it depends largely upon cattle, sheep and farming for its income. It is in Apache county

that the Frisco, the Blue and the Salt and the Little Colorado Rivers head. These streams are filled with fish. The county offers many more opportunities for summer resorts.

Arizona's original de facto capital, Navajo Springs, is in Apache County and is one of the state's most historical places.

COCHISE COUNTY

Bisbee and the Warren Mining District

Bisbee is the most richly mineralized deep mining district in Arizona. Copper is the predominating mineral of the camp, but gold, silver, lead, zinc and manganese are mined in considerable quantities. Latest reliable figures place the valuation of production at \$57,300,000 per year. About 5,000 men are employed in the mining industry of the district, of which Bisbee is the business center. Lowell, Cochise, Warren and Don Luis are thriving suburbs.

The population of the Bisbee-Warren district is about 25,000, and is increasing at a fairly rapid rate. Street car and jitney service connect all parts of the camp. The district is not lacking in educational facilities, maintaining many high school buildings, in-Churches of nearly every denomination are represented, as well as the Y. M. C. A. and the Y. W. C. A., which boast of a large membership

The great mines of the camp are equipped with every modern facility for mining on a large scale. Owing to these activities, farm ers have settled in the valleys of the county and today there are many prosperous farming communities in the Sulphur Springs, San Pedro and San Simon Valleys. McNeal, in the Sulphur Springs Valley, is a thriving little community where, a few years ago, the jack rabbit and coyote were the only inhabitants. Willcox is fast growing into a city of importance, being pushed to the front by the farming and mining interests. Bowie and San Simon are also developing into important farming and fruit raising districts, while St. David, Robinson and Light are helping to place hundreds of families on the road to success.

Vast stretches of land considered valueless a few short years ago are now taxable property, and a good roads campaign, which is being launched, insures more rapid development and greater prosperity for the future. The famous Borderland Route passes through the county and will prove to be the trail of opportunity to many strangers who may linger at points of interest while touring the great southwest.

Douglas

Douglas, the Smelter City of the Southwest and the gateway to two Republics, is situated on three railroads and five transcontinental automobile highways. It is the trading and supply center for the mining, smelting, agricultural and stock raising industries within a radius of 75 miles.

During the year 1916 the mammoth smelting plants at Douglas produced over one-third of the copper bullion produced in the entire state of Arizona, or over one-ninth of the entire copper output of the United States.

The elevation of Douglas is 3973 feet, and the population 18,875. The Douglas district supports fourteen school buildings, including a modern High School. Like the BisbeeWarren district, churches and fraternal and social organizations are well represented.

For further information address the Secretary of the Douglas Chamber of Commerce and Mines.

Tombstone

Of Tombstone, County Seat of Cochise County, one of the richest counties in the state, much could be written. It's past fascinating history, dating back to the days since its founder, Edward Schieffelin made his first camp at the spot now marked by a huge granite monument, would make volumes.

Almost everyone in Arizona, particularly the pioneers, are acquainted with the history of the famous old camp. But the Tombstone of today is a different city than the Tombstone of the early '80's. It has outgrown and outlived the conditions of the past, although, true, there yet remain many of the old landmarks, which have been preserved by its people as a remembrance of the days when Tombstone was the "wildest and wooliest" camp in the west.

Tombstone has in the past produced hundreds of millions of dollars in precious metals—gold and silver, and is again listed to be near the top in the production of these metals especially silver. During the great war the Tombstone district was among the most active producers of manganese, used in the construction of the implements of war, but since the demand has subsided, with the signing of peace, this industry has suffered along with other districts of the state. But the end of the war, leaving manganese a drug on the market, brought with it the strong demand for silver, and its mines were immediately turned from the production of the war necessity to that of the peace necessity, and

it is safe to say that before the abnormal demand for the white metal subsides, Tombstone will have produced millions of dollars more to add to the valuation of Cochise County and the State of Arizona.

From a standpoint of health, Tombstone is unsurpassed, boasting a climate milder than that of widely-advertised Southern California, and hundreds of ailing people seek its confines every year for relief, and a movement is under way through the Tombstone Commercial Club, for the establishment of a sanitarium during the present year.

Tombstone is the county seat of Cochise County and is the center of good roads activities now predominating, being on the main line of the Borderland Highway, between Bisbee and Tucson.

COCONINO COUNTY

Coconino County forms the largest division of Northern Arizona, and stands the second largest county in the whole United States. It is embraced in the great Colorado Plateau, having an average elevation of about 7000 feet. Many high mountains, superb canyons, sunken deserts, rare forests and verdant valleys dominate its surface.

The physical features of Coconino County are most interesting, and it is known as the "Wonderland of the Southwest." Large in area—180 miles in length and 140 miles in breadth—it presents a diversity in climate and soil unsurpassed by any other section of country. It is characterized by an atmosphere wonderfully clear with low humidity, which enhances the beauty of distances in-

rescribably. From east to west it is gashed by the grandest of Nature's wonders—the Great Gorge, at the bottom of which sulks the awe-inspiring, mysterious and mighty Colorado River. This section is adorned by the Painted Desert, noted for the bright hues of its shales, sandstones and clays. Red, blue, purple, brown, yellow and white are the colors reflected from this weird expanse. From their giddy heights the prehistoric cliff dwellings and from their frozen sides the ice caves are unusual attractions, as are also the lava beds and the extinct volcanoes. Chief among the latter are the sublime snow-capped peaks of San Francisco, the Sunset Mountain and sturdy old Bill Williams.

Coconino is not only a land of beauty and wonder, but one of utility as well. The Tusayan and Coconino National Forests cover the largest part of the county and are conducive to its greatest industries. The vast area of pine trees contributes to the lumbering industry. The combined daily output of lumber at Flagstaff, Williams and Cliffs is over 400,000 feet. Stock raising is another leading industry, there being 446,300 acres of grazing land, upon which graze many thousand horses, cattle and sheep. The ozone of the atmosphere, which is so conducive to the health of man, seems also to benefit the domestic animals by rendering them strong and exempt from disease. Farming is well established, there being about 20,000 acres under cultivation. While the farming season is short, it has been found altogether sufficient for good crops of oats, wheat, potatoes, cabbage and other vegetables as well as alfalfa. The fine fruits from Oak Creek have a wide reputation for flavor and size and have won prizes wherever shown. Brief mention should also be made of bee culture

and of poultry raising, both having been attempted with fair success.

Though mining is the leading industry of Arizona, it has not claimed much attention in Coconino County. Good prospects have been found, but development work is not active. There, no doubt, lie buried in our hills and canyons, vast quantities of gold, copper and other minerals.

The lawmakers of the state have shown their wisdom and forethought by providing liberally the means for advancing education. The Northern Arizona Normal School ranks with the best of its kind east or west, and is a credit both to the county and to the state. The other schools are noted for their first-class appointments in every respect. The Lowell observatory is an institution of research and learning, situated at the county seat, and the entire state is justly proud in its possession.

The greatest work proposed is the construction of good roads throughout the county which are now well under way. The Ocean-to-Ocean Highway belts the county from east to west, and passes through its main towns, Flagstaff and Williams, from each of which it branches to Grand View and the Grand Canyon.

Flagstaff, the County Seat, lies at the foot of the San Francisco Peaks, and is on the main line of the Atchison, Topeka and Santa Fe Railroad. With a population of nearly 3000 it is a live business center and wide awake in modern improvements and civic advancement. Many points of interest lie within a day's journey of the town. Williams, the town next in size, and claiming a population of about 2000, lies at the base of Bill Williams Mouutain. It is the division

point for the Grand Canyon Railroad, and about 40,000 tourists pass through the town yearly to visit the greatest of the world's wonders. The little city is well provided with schools and churches, has a good municipal government, and judging from present progress has a gratifying future.

GILA COUNTY

A Few Facts Concerning Its Wonderful Progress and Prosperity During the Last Nine Years

1910

Gila County, in point of area, is 4,750 square miles, and is the wealthiest county in the State of Arizona. It has greater natural resources than any other county in the state, if not in the Pacific Southwest.

Its principal resources are copper, silver, tungsten, asbestos and live stock.

The bonded debt of Gila County is \$459,-781.66, and the tax rate is 69c on each \$100 assessed valuation.

Statistical reports claim the United States produces 75% of the world's supply of copper. It is also an established fact that the State of Arizona produces 25% of the United States' supply, and of Arizona's production Gila County produces 30%.

Gila County is centrally located and enjoys the grandest climate at all seasons of the year—to be found in the Pacific Southwest, and is without doubt the tourist's paradise, embracing as it does, the White Mountains in the East, the Sierra Anches in the northwest, the Pinals in the center and the rim of the wonderful Mogollons in the north.

Trout, bass and salmon abound in the lakes and streams; deer, bear, lion, havalenas, elk, wild turkey and quail in large number are found in the mountains.

Gila County's wonderful natural resources are the gift of the Supreme Architect; their development and wealth production and combined efforts of the two great factors of our industrial welfare, capital and labor.

GRAHAM COUNTY

Graham County, the Farmers' Paradise, with a population of 11,000 inhabitants, has 27,184 acres of cultivated land all under irrigation system, and ranges in value from \$65.00 to \$300.00 per acre.

The land is a rich alluvial soil formation and produces the following crops: Wheat, 30 to 65 bushels per acre; Barley, 50 to 100 bushels per acre; Alfalfa, 5 to 8 tons per acre; these being the chief crops of the county. Among other crops raised are the sorghum cane, cotton, corn, apricots, plums, peaches, apples and pears, etc., for which we always have a splendid market and receive the top prices for all our produce.

Graham County raises a great many live stock of which the majority is of blooded stock, such as horses of all classes and breeds. The dairy stock is of an excellent grade and are hard to surpass in any county when it comes to producing. Among others animals raised in Graham County to a great advantage, are pigs, chickens, ducks, turkeys, etc.

Graham County is particularly proud of her splendid school system, which will equal most of the systems found in the large cities of the east.

There are thirty-three districts in the County with an average daily attendance of 2156 pupils other than the public schools we have a high school at Safford and the Gila Academy at Thatcher, both of which take up all branches of the high school work. The efficiency, discipline and system of tese schools is not to be surpassed by any of the like schools in the country.

Graham County is well supplied with firstclass business houses, banks, hotels, etc. The towns of Safford, Thatcher and Pima are all supplied with mountain water which cannot be surpassed in the state for quality and purity.

For the homeseeker the climate, up-to-date accommodations, along with the social facilities are ideal.

GREENLEE COUNTY

Greenlee County, the fourteenth and youngest county in Arizona, was organized from the eastern part of Graham County, the organization having become effective January 1, 1911.

Although primarily a mining county, a large number of cattle are raised in this county, which industry is being gradually developed. There is also a large amount of land under cultivation, and in the southern part are many fine ranches, on which alfalfa, hay, grain, fruit and vegetables are raised, and for the latter, the towns of Clifton and Morenci furnish an excellent market.

For the transportation of ore from mines to smelter, the Shannon Copper Company has built, at a greater cost per mile than any other road in the state, a railroad 13 miles long, and the Coronado Railroad, owned by the Arizona Copper Company, connects the towns of Metcalf and Clifton. The Arizona & New Mexico Railway also passes through the county and connects with the Southern Pacific main line.

Clifton, the county seat, is situated on the line of the Coronado and Arizona & New Mexico Railroads. Morenci is the next town of importance in the county. Both these towns are dependent upon the mining and smelting of copper, and both have ecxellent lighting, water and telephone systems, all modern conveniences and splendidly equipped high schools, with superior opportunities for education.

Metcalf, another thriving town, is situated six miles from Clifton on the Coronado Railway, in the heart of the mining district. Duncan is the largest town in the farming district and the shipping point for the farmers and cattlemen of a large area.

The affairs of the county are handled by capable officials, its outlook is bright, and the desirability of Greenlee as a place of residence is constantly being recognized by persons in search of a permanent home.

MARICOPA COUNTY

The early history of Maricopa County is contemporaneous with the history of Yavapai County, of which it was a part from the organization of the territory until 1871. In 1863 gold was discovered in the Vulture Mountains, twelve miles from the town of Wickenburg in the northern part of what is now Maricopa County, and this was the scene of the first industrial activity in the section which is now the county. This was the same year that Arizona became a separate territory. In 1864 or 1865 Fort McDowell was established on the Verde River. This fort played a prominent part in the early Indian wars and was maintained until 1894.

There were a few settlers in the Salt River Valley in the early 60's, and in 1867 Jack Swilling, a famous frontiersman, organized a company and built the first canal, then called the Swilling Ditch, and now, with the extensions, known as the Salt River Valley Canal. The first town was established about three miles east of the present site of Phoenix, and removed in a few years and the present city of Phoenix laid out.

The County of Maricopa was created in 1871 by a division of Yavapai County, and Phoenix selected as the county seat. The branch line of the Southern Pacific was built into Phoenix from Maricopa in 1887, and the branch of the Santa Fe, connecting with the main line at Ash Fork, completed in 1895.

Agricultural Arizona is centered chiefly in and around the Salt River Valley, which has thousands of acres of soil, than which there is no better in the world.

Approximately 300,000 acres of land are under irrigation. The Salt River project is the world's premier irrigation system, with the great Roosevelt Dam as the backbone. This great work, started in 1906, has already gained a world-wide fame because of its complete success. The Dam is built in a narrow canyon about eighty miles from Phoenix. This giant "Atlas" of stone holds back in a great natural basin, a world of water-wealth which each year adds millions of dollars to the agricultural prosperity of the community. The lake, filling a beautiful valley for a length of twenty-eight miles, is surrounded by hill and mountain sides. There are remains of cliff and cave dwellings overlooking the blue waters and the mighty masonry wall. To a height of 284 feet, this great wall reaches from the bed of the river, where it is sunk into the bedrick for thirty feet deep. It is backed into the canyon walls on each side for thirty feet, is 168 feet thick at the base, and reduces, step by step, until at the top, where it is crowned by a roadway, it is twenty feet wide. Across the top, including two fine bridges, which span the spillways, the length of the dam is 1,125 feet. During the spring of 1916, the water flowed over the spillways to a depth of eleven feet, creating two wonderful waterfalls, each 250 feet high and having a combined width of 425 feet. The capacity of the reservoir is 1,367,-305 acre feet, or enough to cover the same number of acres with water to a depth of one foot. The water generates electric power on leaving the dam, about 25,000 horsepower being secured in this way. There are 781 miles of main canals in the valley, served by water from the Roosevelt dam system, and there are approximately 4,500 farmers under the project. It took five years to build the dam, and no conception of its dignity, its bigness, and its beauty can be secured except by seeing it. When the water is flowing over the spillways, dashing down 250 feet on the rocks and sending up clouds of spray, with every color of the rainbow then, and only then, can one appreciate the true magnificence of the dam.

Nearly one-third of the land under irrigation is in alfalfa. Eighty thousand acres of Long Staple Egyptian Cotton is under cultivation. Sixty thousand dairy cows furnish milk and cream for a number of creameries and condensed milk factories and bring into the county a revenue of \$5,000,000.00. The annual production of the farms of the County is estimated at \$24,000,000.00; the valuation of the livestock is \$6,500,000.00. With the splendid soil and complete system of irrigation in the Salt River Valley, there thrive the date, orange, lemon and grapefruit; cantaloupes are produced in great quantities; the fig, peach, pear, plum, in fact, nearly every variety of fruit trees bear with big returns.

The Livestock Industry is extremely profitable. Sheep graze throughout the surrounding county and are brought in large numbers to the Salt River Valley for shearing and fattening. Conditions for dairying are ideal.

Favorable as the climatic conditions are for agriculture, they are also ideal for health. The dry, clear atmosphere encourages out-of-door occupations. People live more in the open owing to the congenial conditions prevailing most of the year, and all of this counts for health, vigor and active life.

In the heart of the Salt River Valley, lies the City of Phoenix, the capital city of Arizona, and the busy business city of the new State. The growth and future prosperity of the city are assured by the immense possibilities of 300,000 acres of agricultural land. Markets for the produce of the Valley are found in the mining camps in the State, and much is shipped throughout the country.

The educational system is not excelled. Many beautiful High Schools and Graded Schools are everywhere in the County. At Tempe, there is located a Normal School of which the County is justly proud.

There are more than 300 miles of railroad within the County valued at \$11,500,000.00; 17,500 miles of telephone lines and more than 1,000 miles of telegraph lines.

To those who make a change from choice, and to those who must of necessity do so, the Salt River Valley of Arizona offers opportunities which surely will satisfy all the most exacting requirements.

MOHAVE COUNTY

Mohave County, forming the northwest corner of Arizona, is the second largest in the State, its extent being 13,000 square miles.

The resources of the County are diversified, consisting of mining, livestock and farming. Mining is the principal industry, mining properties forming three-fourths of the County's assessed valuation. Every known base and precious metal is found. The Wallapai and Cerbat Mountain Ranges, extending the entire length of the County north and south, are rich in gold, silver, copper, zinc, lead, tungsten and molybdenum. About 1,000 miners are employed in the County. The mineral output is approximately \$8,000,000.00 a year.

There is little farming carried on in the County, mainly because of the lack of available water for irrigation purposes. The cattle and sheep industry, however, is becoming a material asset.

NAVAJO COUNTY

Navajo County, so named after the noted tribe of Navajo Indians, is located in the northeastern part of the State and in extent is some two hundred miles long from north to south and approximately fifty-one miles wide. The elevation ranges from 11,000 feet in the White Mountains to 4,850 feet at Winslow and the annual precipitation is what may normally be expected at these elevations, i. e., from 10 to 36 inches. The prevailing winds are from the southwest.

As in other parts of the State, Navajo County is surfaced with fertile, cultivated valleys, mountain glades and streams, alternated with upland grazing plains. The southern part of the County is embraced in the Sitgreaves Forest Reserve with headquarters at Snowflake, and the Apache Indian Reservation, while a portion of the northern part of the County includes the Moqui and Navajo Indian Reservations.

Small sawmills in the forests furnish lumber for building purposes throughout the County.

The cattle and sheep industry is of great importance, the plains furnishing ideal grazing places as the winters are usually mild. Native grasses are abundant in season, and browse plants, such as chamisa and sage afford plentiful forage during the winter. Artesian wells are being brought in in many localities heretofore arid, and these, in connection with storage tanks, the extermination of prairie dogs and the eradication of poisonous plants will increase the carrying capacity of the range from 20 to 30 per cent.

The County contains a white population of some 15,000, the Indian population of the reservations approximating the same number.

The area adjacent to Holbrook has been highly endorsed by eminent geologists as extremely favorable to the production of oil in commercial quantities and the natural indications strongly bear out these endorsements. Exploration is being carried on by several oil development companies, which if successful, will mean a wonderful new industry for this County as the endorsed area is of immense acreage.

Rail transportation in the County is furnished by the main line of the Santa Fe railroad, which crosses the center of the County from east to west, following the course of the Little Colorado River and the Rio Puerco: and by the recently constructed Apache Railroad running from Holbrook some 72 miles southeasterly, passing through the southern portion of the County to the convenience of large and prosperous cattle and sheep ranches, and on into Apache County and terminating at Cooley, at which latter point it will afford an outlet for the vast timber resources consisting of the largest body of standing pine timber in America. This latter road also passes through the eastern portion of the endorsed oil area south of Holbrook, and with expected production, will be of great benefit in the resultant transportation problem.

The principal towns of the County are Holbrook (County Seat), Winslow, St. Joseph, Woodruff, Snowflake, Taylor, Showlow, Pinedale, and Lakeside. Holbrook and Winslow are trade centers on the Santa Fe, and here are found large mercantile houses carrying sufficient stock to supply the re-

quirements of every part of this and Apache County. Other towns and rural settlements are located at favorable places on rivers, streams and in the mountain valleys. These towns are connected by telephone lines and auto roads.

Navajo County has been liberal in its road building programme, \$400,000.00 having been provided for this purpose in the past two years. Of this amount some \$150,000.00 still remains available for immediate use. The roads of the County compare very favorably with the best in the southwest.

A highly efficient common school educational system is maintained by the County and State, with high schools at Holbrook and Winslow. An excellent denominational academy offering four-year courses, is maintained at Snowflake by the L. D. S. church. The Government maintains schools for Indians on the various Reservations.

The mountain districts will compare with many more noted places for recreation, the surroundings in some portions being ideal and offording a sportsman's paradise during the open seasons, large and small game and fish being found in abundance. The forest covered mountains afford a haven of rest for the tired business man and a luxury to the pleasure seeker during the summer months.

The Petrified Forests, eighteen miles from Holbrook, afford an interesting study for scientists and are a constant source of wonder to numerous visitors, offering an opportunity for reflection on the wonders of nature and keenly arousing an active immagination.

Many ancient ruins of cliff dwellings and Indian Villages attract the scientist and the curious. The annual Snake Dance of the Hopi Indians has become an event of national interest and is perhaps the most notable, weird and interesting remnant of tribal customs existing among the Indian Tribes on the American Continent. This dance is continuous for seven days and is held during the summer months about 100 miles north of Holbrook at a point easily accessible to motorists.

PIMA COUNTY

The country including what is now known as Pima County, was the subject of exploration by Spaniards a quarter of a century before the founding of St. Augustine, Florida, which claims the palm as the oldest settlement in the United States. As the whole of the country now known as the United States was terra incognita as well as terra nova during the early sixteenth century, Tucson's right to be called the first stand of the white man in that geographic area might easily be maintained. Indeed, the Massachusetts Historical Society holds the brief for Tucson, in this regard, and the word of that pioneer organization is hardly to be gainsaid.

Alvar Nunez' wanderings are common knowledge amongst persons of an inquiring mind concerning the history of what now is Arizona. He passed through this part of the country twenty-five years before St. Augustine was known by the Spaniards. The expedition made by Padre Marcos de Niza to attempt to verify the story of the Seventiates of Cibola, famed for their great stores of gold and silver, adds quite a scrole to the

history of early journeys hither by the white men. Coronado, most intrepid and efficient of the conquistadores, in the year 1540, marched his sturdy men from Culiacan, through the country of the Pimas, for which tribe the county is named, passing down the valley of the Santa Cruz, through the present site of Tucson, and across the pleasant valley reaches of the Gila River, then swarming with these enterprising and prosperous Indians.

Antonio de Espejo, 1582, was the next valiant soul to put a leaf into the world's history concerning this interesting land, and his accounts were tinged with marvelous reports of great mineral riches, all since abundantly justified. It was more than a century later, however, before real, constructive colonization began in the founding of the Mission San Xavier del Bac, nine miles south of Tucson, in 1692. The founder, Padre Eusebio Kino, came out of Mexico City, full of zeal for the propagation of the Jesuit brotherhood, planting missions a few miles apart, that of Guevavi, thirty miles south of Tucson, 1687, being one of these.

Modern history writes that, early in the eighteenth century, when the revolts of the Apaches became alarming, the Spanish government erected a Presidio at Tucson, maintaining a small garrison for the protection of the people. Indian depredations continued, however, in the outlying districts; and when, in 1847, nearly a century later, the close of the Mexican war brought this part of the world to public attention, there was little left to define the early landmarks of civilization, except the walled presidios.

By the terms of the Gadsden purchase, in 1853, Uncle Sam took over Pima and ad-

jacent Arizona counties, bringing into his domain a mineral treasurehouse undreamed of. Then the United States' soldiers took possession of the presidios, general immigration proceeded steadily, great production in minerals and cattle began, and Tucson, the only important settlement in that wide radius, rapidly became its trade center and metropolis. Tucson has held the lead in population ever since, the census of 1910 giving her a substantial majority over other Arizona cities, which only the growth of Phoenix threatens to overcome.

The building of the Southern Pacific rail-road through Tucson in 1880, opened up great possibilities for trade. From that time, growth has been substantial and steady. Only a decade since Tucson was made the junction point for the Southern Pacific of Mexico, connecting the city with the west coast of Mexico, through the Nogales gateway. In 1912, the El Paso and Southwestern, connecting line of the Chicago, Rock Island and Pacific System, made Tucson its western terminus. Extensive and rich copper discoveries at Ajo, by the Calumet and Arizona interests, called for the building, in 1916, of the forty-mile railroad, connecting Ajo with the Southern Pacific main line at Gila Bend. The early completion of a line to Port Lobos, on the Gulf of California, connecting Tucson with Ajo, direct, is as-sured. This will give Tucson a strategic position as the railroad center of Arizona. With the resumption of stable conditions in Mexico, Tucson promises to become a great jobbing and distributing point, being the only city of great importance located on main lines of rail, between Los Angeles and El Paso; and north and south, for more than 300 miles.

Here are located the offices of the Southern Pacific of Mexico, Arizona Eastern Railroad, and Southern Pacific Railroad. Shops of the Southern Pacific Railroad give employment to over 1000 persons, and there are centered at Tucson over 3000 railroad employes. Other industrial plants at Tucson include a large flouring mill, two ice plants, gas and electric plant; a street railway system, brick yards, planing mill, foundry, fiber factory and saddle factory. Several very large stocks of mining machinery are handled here. The annual payroll of all the industries named is over \$4,000,000. The four principal banks of Tucson have on deposit \$6,126,000. The assessed valuation of the city is \$20,000,000.00; and that of Pima County, \$70,000,000.00. There are 9.100 square miles in Pima County.

Next to mining and railroads in Pima County, the cattle raising industry, while the least visible to the casual observer, is one of the large items of revenue. Sales of cattle for 1918 from Pima County ranges, totaled \$2,000,000.00. Goats, hogs, dairy cattle and poultry are important sources of revenue. The fertile valleys surrounding Tucson have yielded, during the past ten years, over 40,000 acres to the plow. Water is procured by pumping, the underground flow being close to the surface and apparently everlasting. So-called "dry farming" is practiced profitably on certain foothill soils having the advantage of sub-irrigation. The rainfall in Pima County averages about eleven inches. In 1918, five hundred bales of Pima long staple cotton were marketed at an average price of sixty cents per pound. with an average cost per pound, f. o. b., of twenty-four cents.

Alfalfa is one of the most profitable and dependable crops of this region, five cuttings being the conservative rule, though as much as ten tons of alfalfa have been harvested from one acre. Barley and wheat, milo maize, feterita and ninety-day corn flourish in these valleys.

There is great opportunity in Pima County for truck gardening, as this section of Arizona relies nearly altogether on the California markets for early vegetables. Fruit growing is not yet upon an established basis, though apricots, peaches, pears and plums thrive exceedingly.

Alike with other Arizona cities, the educational facilities in Pima County are not to be excelled anywhere. Within the present city limits is situated the University of Arizona, possessing every known classroom and laboratory adjunct. Nearly \$1,000,000 a year is appropriated for this Institution alone. A bright future is guaranteed to all graduates of its mining department, and students are assured practical, profitable work during the summer vacations in adjacent mining fields. The high, grammar, primary and kindergarten schools are housed in splendid modern buildings, and new ones are projected for completion at an early date. There are ninety-six schools in Pima County, including one high, twenty-four grammar and seventy-one primary.

Nearly all the more prominent denominations are housed in splendid church edifices.

For several generations, the climate of Tucson has been well known for its efficacy in the treatment of pulmonary disorders, affections of the bronchial tubes, catarrh and rheumatism, and Tucson has been obliged to turn away hundreds of health-

seekers for several seasons, owing to inadequate accommodations. As this is written, plans for hundreds of small dwellings are being perfected, hotel factors are being enlarged, and this defect promises to be early remedied. The season between October 1st and May 1st furnishes a mild, dry and delightful climate for both the ailing and the robust. A great many wealthy persons spend this part of the year in Tucson, numbers having palatial homes here. There are no sudden changes in temperature, no extremes in heat or cold, and the possibilities of living in the outdoors are almost unlimited.

Good roads travel apace with other development in most wide-awake sections, but in Pima County the expenditures in permanent highway construction and maintenance are at par with the needs of a population three times greater than is here found. Splendid roads connect the Old Pueblo with Ajo, Nogales, Benson and other thriving neighbors. Tucson inhabitants own nearly 4000 automobiles, and for a city of scarcely 26,000 this speaks volumes.

The depots of the Southern Pacific and

El Paso and Southwestern railroads at Tuc-

son are beautiful examples of the Spanish style of architecture, favored by the padres. Both are surrounded by spacious gardens, reveling in the plants peculiar to this region.

Tucson has the finest city hall building in Arizona, and its Armory and Convention Hall, with band stand and park, are the objects of wide admiration. Some other buildings, to which Tucsonians point with pride, are the splendid Scottish Rite Cathedral, Car-

negie Public Library, Country Club, Old Pueblo Club, Woman's Club, Santa Rita and Congress Hotels.

The New Cornelia property of the Calumet and Arizona Copper company at Ajo, is one of the greatest factors in the assessed wealth of Pima County. Other promising copper properties produce large volumes of the red metal. Great activity is at present manifested in the production of silver and gold, and in the outlying districts large tonnages of tungsten and kindred ores have been mined.

The mineral possibilities of Pima County have barely been scratched, according to the most competent authorities.

Tucson maintains a progressive Chamber of Commerce, supported from city and county taxes. This city was one of the first to adopt this very satisfactory means of obtaining revenue for publicity. At its office in the Old Pueblo building, visitors are welcome and assisted in every way to enable them to enjoy life in this fine old county.

PINAL COUNTY

Pinal County, although one of the smallest divisions of Arizona, is looked upon as one of the coming counties, as nature was here particularly lavish of her favors. Pinal has a wondrous landscape of mountain and mesa, valley and canyon, with exquisite coloring. On the higher mountains are forests of pine, oak, ash and walnut. Through the county run the Gila, the San Pedro, and the Ara-vaipa, while on both sides of these streams are level stretches of land of wonderful productive capability and endurance. Then, too, large areas within the county are impregnated with all the precious metals and minerals of commercial value. Last, but not least, Pinal is possessed of a climate semitropical in mildness and unsurpassed in its health-giving properties, with an atmosphere dry and pure in the extreme.

The mineral district of the county covers at least two-thirds of its surface area, the greater portion of which has not yet been touched by the prospector's pick. Yet the mines of the county have yielded in gold, silver, lead and copper a sum approximately estimated at \$200,000,000. The metals and minerals here exist in both veins and pockets, and where explored have proven of great magnitude and value. As the unexplored surface exhibits the same physical condition and the same evidences of mineralization as do those which have been explored, it is rational to assume that they, too, will prove both extensive and valuable. The usual metallic constituent ores in Pinal are gold, silver, copper and lead, and most of them carry a sufficient percentage of iron and lime to make them self-fluxing, thereby reducing the

cost of smelting to the minimum. There also exist, in undetermined quantities, ores of the rarer metals such at platinum, uranium, nickel, cobalt, bismuth, tungsten, vanadium, etc. Bituminous coal measures, in an undeveloped state, but sufficiently prospected to demonstrate they can be made profitably productive, exist in the Deer Creek district. The two great mining properties of the county are the Magma at Superior, and the Ray Consolidated at Ray.

Pinal County has a vast body of fertile agricultural land needing only water to make it as fruitful as the delta of the Nile. Through the center of this great stretch of land trails . the Gila River, with its 17,000 square miles of watershed and phosphated water, while through its southern portions runs the Santa Cruz River. The underground waters of the Santa Cruz are sufficiently near the surface to make irrigation, by means of pumping plants, feasible and profitable. During the past year several hundred acres of land have been put under successful irrigation by means of pumping, the lift being from thirty to sixty feet. Congress has appropriated \$250,000 for the construction of a diversion dam on the Gila River east of Florence and for the beginning of a distribution system. This diversion dam will provide a means of diverting water from the river for irrigation purposes at all times of the season. Heretofore, water was diverted by means of brush dams, which have been a constant source of expense and worry to irrigators. There are now several canals—besides several privately owned canals—taking water out of the Gila River near Florence, by which method thousands of acres are irrigated.

In the San Pedro Valley is a large acreage of exceedingly fertile land that can be

reclaimed by river and artesian water. The Aravaipa Valley, which comes into the San Pedro Valley about twelve miles above Winkelman, has an abundant water supply in the Aravaipa creek, which flows through the center of it, and all the lands of this picturesque little valley are planted to fruit, including navel oranges, lemons, apples, peaches, pears, apricots, plums, grapes and all kinds of berries.

Owing to a rare combination of climate and soil conditions, the land surrounding Florence, and extending to and surrounding Casa Grande, will produce to perfection oranges, lemons, grapefruit, olives, figs, nectarines, peaches, apricots, plums, pears, pomegranates, grapes and all kinds of berries.

SANTA CRUZ COUNTY

In March, 1899, there was cut off from Pima County approximately 1,210 square miles, which made a new county called Santa Cruz. This little county started out in life handicapped with a bonded indebtedness of approximately \$86,607 against an assessed valuation of approximately \$867,943, and about \$12,000 in the treasury. Today the assessed valuation is over \$10,000,000, and the bonded debt, together with all other debts of every kind, is only \$471,196.02 with \$165,162.71 in the treasury.

It is not generally known that the small area embraced within the limits of Santa Cruz County was the seat of the earliest mining known on the Pacific Slope. Without doubt, the first and earliest mining in these regions was done by the Jesuits, who founded

a chain of missions in the valley of the Santa Cruz River. In what is now Santa Cruz County three missions were founded by Father Kino, the first at San Felipe Guevavi in 1687, about nine miles northeast of Nogales, another at San Cayetano del Tumagacori (known now as Tumacacori) in 1691, about nineteen miles northwest of Nogales, and a third at Hantiago about the same time, the site of which is not accurately known. The old church at Tumacacori is in ruin, fast falling down, and the Guevavi is nothing more than a mound of earth.

While some of the oldest mines are still in operation and yielding a good output every year, the more recently discovered and developed mines are yielding good outputs, principally of gold, silver, copper, lead and

some iron ore.

While the mines have been developing, other industries have been keeping abreast with the tide of advancement, and not the least of these is the farming industry. Where a few years ago, were many thousands of acres of unfenced range lands, today are fields of corn, beans, potatoes, a small amount of grain, and the more perishable vegetables, which are sold and consumed in this county, very little going to outside trade. Some of the farm exhibits of this county have brought home blue ribbons from the State Fair in Phoenix. However, there are still many thousands of acres of range land, where feed and water are plentiful for the range cattle. A few years ago cattle were selling for \$10, \$20 and \$30 per head, which at that time was considered a good price, and today they are selling for \$35, \$45 and \$50 per head.

Along with the progress of this little county has come good roads. Of the 185

miles of roads in Santa Cruz, 75 miles are good, such as the Nogales-Tucson Highway and the Nogales-Patagonia roads—roads that are as good and as scenic as can be found anywhere, leading, as they do, past such interesting sights as Tubac—the oldest town in the United States—Tumacacori, Guevavi and old Fort Crittenden, where many of the settlers, in the early days of Apache raids, had to seek protection many times, and at great risk of their lives.

Truly, nineteen years have wrought wonful changes in this, the smallest spot on the map of the best state in the union, and may her growth and prosperity be as good and as everlasting as the water that flows from her streams and springs.

YAVAPAI COUNTY

Yav-a-pai was the name given by the Apache Indians to all of northern Arizona. It means literally, the mountain country, being derived from "yava" (the hills) and "pais" (pronounced "pie"—a corruption of the Spanish word "pais," meaning land).

Yavapai County is situated nearly in the geographical center of the new State of Arizona. Within its boundaries are several of the richest mines in the world. Its broad fertile valleys contain large areas of soils of great depth, which produce the finest quality of grains, vegetables, deciduous and small fruits in the Southwest. Its citizenship, gathered largely from the southern and western states, but representing every state and province in the Union and in Canada, is second to none in the world. Prescott, the

county seat, has a foreign-born population of but 8 per cent, the lowest in the southwest. In no country will be found men and women of higher culture; nowhere are educational facilities in a higher state of development.

Gold was the magnet which attracted and inspired the California Argonauts and gold seekers in the early '60's, to penetrate and prospect the Colorado River and its tributaries for the precious metal. The first permanent American settlement was established in this part of the country in 1862, where the county seat of Yavapai—Prescott—now stands.

Yavapai County consists very largely of majestic mountains, lofty table lands and beautiful fertile valleys, nestling at altitudes of from 2400 to 6000 feet above sea level. The principal industries of this vast domain are mining, stock raising, farming, and to a large extent, its climate is consid-

ered a valuable asset.

Mining—The principal resource of Yavapai County is mining. During 1917 and 1918 this industry showed a wonderful increase in the development of new as well as the established properties and brought prosperity to hundreds of her citizens, as well as to successful investors throughout the United States. Such an impetus has been given the mining industry in this county that it has awakened the world to the fact that here is located one of the richest, if not the richest mining districts in America. Here may be found gold, silver, copper, lead, zinc, tungsten, antimony, molybdenum, onyx, marble, tufa, granite, red sandstone, limestone, cement, clays and fire clays. With the excellent railroad, road and smelter facilities and the market for supplies, this section to-

day offers one of the best fields for mining to be found anywhere.

Stock raising is the second industry of importance in Yavapai County. Of the livestock industry, sheep raising is perhaps the most important branch. Many large bands graze on the mountains during the spring and summer months and gradually make their way to the lower valleys in the fall and winter. The oak brush, which is an evergreen, and the grasses of the mountain sides, supply forage for the summer months, and the grasses of the valleys and foothills during the winter months. Mesquite brush and catsclaw also supply excellent browsing. Cattle in this locality are healthy and free from disease, the average estimated increase being 40 per cent. Considerable attention has been given to the raising of goats during the past few years.

Farming occupies the third place in importance with respect to Yavapai's industries. The principal valleys are Big Chino, Little Chino, Ferguson, Lonesome, Peoples, Santa Maria, Skull, Thompson, Williamson and Verde. Large areas in these mountaingirt valleys, only a portion of which are under cultivation, contain fertile arable soils, in depth from two to fifty feet, and at altitudes averaging 4000 feet. Yavapai County bids fair to equal any other deciduous fruit district in the United States for the quality. flavor, size and texture of her apples, plums, pears, peaches, apricots and small fruits. At the St. Louis Exposition, the silver medal for apples was awarded Yavapai County, competing against the world. Gold medals and blue ribbons have been won by her fruits and vegetables at various times at the International Farming Congress.

Railroads—The main line of the Santa Fe runs through the northern part of the county for a distance of sixty-three miles, Ash Fork being the junction point for the branch line to Prescott and other centers southward. The Prescott and Eastern, and the Bradshaw Mountain Railroads, also branches of the Santa Fe, penetrate the rich Crown King and other famous mining districts, Prescott, Jerome, Humboldt, Mayer, Congress, Jerome Junction, Clarkdale, Seligman and Ash Fork, with aggregate population of approximately 18,000, are the principal markets of the county.

General Advantages—The educational facilities of Yavapai are worthy of comment. Here are to be found schools, churches, clubs and benevolent societies, which in membership, equipment and excellence would do credit to the most advanced and densely populated sections of the Eastern States. For the sightseer and artist, Nature has wrought in close companionship all of that rugged charm that attracts in the Garden of the Gods and other meccas of world-interest. It's cliffs and cave-dwellings and hieroglyphic records are held by experts to be as old as the pyramids of Egypt. In mileage, excellence of construction and upkeep of her state highways and county roads since statehood, Yavapai County has made the greatest progress of any county in Arizona. The trip from Prescott to El Tovar, Grand Canyon, a distance of 130 miles, can be made comfortably in a day. Many points of interest. such as Cathedral Cave, Granite Dells, Montezuma Castle, Montezuma Well and Finnie Soda Springs are easily accessible. A day full of charm and interest can be spent on the trip to Jerome and Clarkdale, where are

located, respectively, the great copper mines and mammoth smelter of the United Verde

Copper Company.

Climate—The climate of Yavapai County is one of its chief lures. Throughout its broad domain there are more absolutely clear days during the year than in any geographical subdivision of like altitude in the world. Here is found especially a desirable all-the-yearround climate, everywhere cool in summer and varying from mild to cold in winter, according to the elevation.

When it is taken into consideration that Yavapai County's assessed valuation in 1917 was \$98,922,996.38, and in 1918 a total of \$132,342,515.08, showing an increase in one year of \$33,419,518.70, it may readily be seen that Yavapai County is making strides in its development.

Those desiring to acquaint themselves more particularly with respect to Yavapai's industries, etc., are invited and requested to address the Commissioner of Immigration for further information.

YUMA COUNTY

There is no richer section of the world than Yuma County. In the early days it was noted principally for its production of gold, silver, copper and lead, at which time agriculture was almost unknown because of the arid condition of the soil. Millions upon millions of dollars of the precious metals were shipped by boat from Needles, Parker and other points along the turbulent Colorado, a regular line of steamers plying between those points and San Francisco, California. In those days the mines were worked in the crudest possible way and unless they showed

phenomenal richness they were abandoned forthwith. In recent years, many of these old, abandoned mines have been re-opened and today are rated among the big producing mines of the State, yet the vast mineral territory of the County has merely been touched. It is freely predicted that within the coming year some of the richest and best paying mines in the state will have been developed in the Parker-Bouse-Swansea districts, to say nothing of the phenomenally rich gold mines almost at Yuma City's door.

In recent years, through the aid of the U. S. Reclamation Service, Yuma Project has been highly developed, something like 100,000 acres of the richest valley lands in the state now being under irrigation. All kinds of grain, corn, vegetables, alfalfa, cotton, deciduous fruit and berries grow to a perfection not attained elsewhere, while the 40,000 acres of mesa or high lands immediately adjacent to the city of Yuma are now being prepared for irrigation under what is known as the Yuma Mesa Auxiliary Project. In his report to Congress advocating the passage of the bill making this possible, Secretary of the Interior Franklin K. Lane declared that this 40,000 acre tract is the only frostless belt in the United States. Oranges, lemons, grape fruit, tangerines, dates and figs grow to the greatest known perfection on this immense tract of "frostless" land, and they are all from one to two months earlier than the earliest fruit of the same character in either Florida or California. Even tomatoes can successfully be grown on the mesa all the year round, which opens up a wide field for early truck gardening as soon as the government completes the irrigation system for the Yuma Mesa Auxiliary Project.

Stockraising has become one of the best paying industries in Yuma County since the opening up of the project. Alfalfa produces from seven to ten cuttings per year, with an average yield upwards of one ton to the cutting. Kaffir corn, milo maize and feterita are the staples for forage and fattening purposes, each of these grains producing an average of two tons of seed per acre and ten to twelve tons of forage per acre in addition. Hogs and cattle, therefore, are raised in great numbers on Yuma Project and adjacent wild ranges.

All kinds of deciduous fruit do remarkably well on Project lands, especially the luscious apricot, the very first and most deliciously flavored in the market being shipped direct from Yuma as early as the first week in May. Peaches do equally well, as does the Bartlet pear. In the vegetable line, Yuma is noted for its cabbage and lettuce, the latter conceded to be the finest grown anywhere in the world. It is a common thing for these two vegetables to yield from \$800 to \$1000 per acre.

A new industry destined to become quite popular is that of the Texas paper-shell pecan which thrives on Yuma Project as well as it does in its native state. It is predicted that in a few years practically all the irrigating ditches throughout the Project will be lined with these nut trees. They are quite prolific and there is never any danger of enough

frost to injure them.

Cotton, also, is becoming one of the leading crops of the Valley. It is safe to say that no less than 25,000 acres are planted to cotton this year (1919) and this will bring an average yield of at least one bale to the acre. In 1918 there were 20,000 acres in cotton, which produced 22,500 bales.

Yuma Valley may well be called "The Land

ARIZONA

A Brief Summary

Arizona was organized as a territory in 1863, and was admitted to the Union as the forty-eighth state, February 14, 1912. Arizona is a big state with a small population. Its area is 113,810 square miles. According to the Fourteenth Census, taken as of January 1, 1920, its population is 334,162, which represents an increase of 129,808, or 63.5 per cent over the population in 1910. During the same period the rate of increase for the United States was 14.9 per cent.

The following summary shows the population of Arizona from 1870 to 1920, inclusive, together with the number and per cent of increase for each decade, in comparison with the per cent of increase for the United States as a whole. The population in 1860 of Arizona County, N. Mex., comprising the area now constituting the state of Arizona and a small part of Nevada, was 6,482. Arizona is a big state with a small popula-

Arizona is famous for its copper mining industry, the output of this metal in 1919 reaching 750,000,000 pounds. It contains great forest areas, high mountains, great level plains, important rivers and has a wide range of climate and elevation. Arizona has 14 counties, 10 incorporated cities, 20 incorporated towns, 11 Indian Reservations, and parts of three others are located within the state.
